Special Features:

Part of the miles 2000 m16a2 individual weapon system (iws)the m16a2 iws is designed to be used by soldiers armed with m16a2 rifles so they may participate in force-on-force tactical weapons training. The m16a2 iws consist of small arms transmitter , torso detector assembly and helmet detector assembly. The sat when mounted on an m16a2 weapon, transmits a laser encoded message when the weapon is fired using blank ammunition. The torso and helmet detector assemblies detect laser encoded messages are decoded and data is processed

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T356-a
