General Description:

The light armored vehicle, full crew interactive simulation trainee (lav-fist) is a computerized full crew functional trainer for either the lav-25 full crew or turret crew. The lav-fist transforms the lav-25 vehicle into a fully integrated trainer by appending sensors to many of the actual controls located inside the vehicle and interfacing with the operational control panels onboard the vehicle. The system is intended to supplement the current precision gunnery system (pgs) by providing hands on training for full crew vehicle operations and tactical deployment skills

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
