Direct Current Voltage Rating In Volts:

28.0

Power Source:

Dc

Direct Current Usage:

Required

Training Phase:

Operation, maintenance and theory

Product Name:

Trainer, air conditioning system, aircraft

Special Features:

This trainer has two panels. Dimensions of panel one: 96 in l, 30 in w, 60 in h, panel two: 48 in l, 6 in w, 60 in h; major components: air turbine motor, air conditioning control panel, cabin thermostat and blower motor, pneumatic thermostat, temperature control box, refrigeration assembly, engine start control-valve, engine 14th stage compressor, overheat warning thermostat, anti-ice control thermostat, recirculation fan; this item is needed for extensive training due to the varied and complicated system involved in the c-130e air vehicle

Functional Description:

Used to instruct and familiarize maintenance and operating personnel on the air conditioning system as pertains to the theory, operation, location, recognition, construction, aircrew operation, adjustment, troubleshooting, and inspection

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T356-a
