General Description:

Jmodule performs three functions, contains an electronic scott-t circuit which converts three wire synchro signal into two resolver type signals, a dual peak sample and hold circuit, under control of a reference processor circuit, demodulates the resolver signals, a dual multiplexer circuit, under control of a channel enable signal, makes the demodulated signal available at the output; operating temp 0 degrees c to 70 degrees c; 2.170 in. 0/a lg, 1.535 in. 0/a w, 0.860 in. 0/a h

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
