Operating Tempurature Range:
-40.0/+85.0 degrees celsius
End Application:
Core b instal
Unit Design:
Internal circuit card
Special Features:
Is a complete, multipurpose, 12-bit analog-to-digital converter, consisting of a user-transparent onboard sample-and-hold amplifier (sha),
10 volt reference, clock and three-state output buffers for microprocessor interface, pin compatible with the industry standard ad574a and
ad674a, but includes a sampling function while delivering a faster conversion rate. The on-chip sha has a wide input bandwidth supporting
12-bit accuracy over the full nyquist bandwidth of the converter, fully specified for ac parameters (such as s/(n+d) ratio, thd, and imd) and
dc parameters (offset, full-scale error, etc.). With both ac and dc specifications, the ad1674 is ideal for use in signal processing and
traditional dc measurement, design is implemented using analog devices' bimos ii process allowing high performance bipolar analog circuitry
to be combined on the same die with digital cmos logic
Shelf Life:
N/a
Unit Of Measure:
Demilitarization:
