Unit Design:

Internal circuit card

Special Features:

Wstabilization performance of the system is enhanced in both azimuth and elevation servo channels, the imc consists of a stabilized mirror assembly suspended by bendix flex pivots from a stationary platform, four voice coil type linear actuators are driven by stabilization loop error signals in both azimuth and elevation. Feedback is provided via four eddy current proximity sensors. The imc subsystem mounts directly to the optical bench with its mirror assembly within the optical path

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A50810
