End Application:

5840-01-601-7155

Basic Ingredient:

Zinc dust and petrolatum

Quantity Within Each Unit Package:

1.0 pounds

Usage Design:

To prevent seizing during assembly or disassembly of threaded or unthreaded aluminum and aluminum alloy components engaged with components fabricated from similar or dissimilar metals; it also provides corrosion protection to the metal surfaces; the compound is not suitable for use with optical instruments

Product Name:

Thread compound; antiseize, zinc dust-petrolatum

Supplementary Features:

To order this product, the following is required: title, number, date of cid, quantity, preservation, packaging and marking

Specification Data:

58536-a-a-59313 professional/industrial association specification

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A535n0
