Special Features:

Container is manufactured from .190 inch thick aluminum and designed to securely store forty (40) m-16 or m-4 weapons. The 36 inch door has a reinforced lockable flange with two 3/8 inch diameter holes to lock the container doors. It has two heavy duty hinges to aid in the security of the container. Four m12 weapons racks are securely mounted inside the container. The racks are all aluminum construction, lightweight, and rust resistant. The container has two shelves that can be attached to the outside short end of the container to allow personnel a place to perform minor maintenance and certified personnel to issue weapons. The container is sling able and four way forklift able. See text for rest of information.

General Description:

It is designed to fit perfectly inside the usable space of the 463l pallet. The container has eight (4) lower tie down rings secured to the bottom corners for sling, and (8) mounted to the lid mounted for securing down the container to a 463l pallet. The lid has four (4) locking brackets that positively secure stacked containers. Each container has four 10" forklift tubes that allows access to all sides for easy transport. The container has a 36" wide door which allows easy loading and access to the weapons and hazardous materials during in-flight emergencies.
