Fabrication Method:

Cold rolled

Width:

48.000 inches

Length:

144.000 inches

Cross-sectional Thickness:

0.1250 inches

Basic Shape Style:

Solid

Min. Tensile Strength (psi):

64 pounds per square inch

Minimum Yield Strength:

52 pounds per square inch

Special Features:

Temper t87; elongation pct 6; hea treated; corrosion resistant, required for elevated strength; good weldability in the artificially aged tempers

Material:

Aluminum alloy 2219

Material:

Aluminum alloy 2219

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A13100
