Fabrication Method:

Cast

Length:

1.083 feet

Cross Section Inside Diameter:

9.500 inches

Cross Section Outside Diameter:

11.500 inches

Basic Shape Style:

Round w/ core

Min. Tensile Strength (psi):

30000 pounds per square inch

Special Features:

Machined inside, outside and ends

Material:

Copper alloy, qq-c-390, alloy 836

Material:

Copper alloy 836

Material Specification:

Qq-c-390, alloy 836 federal specification 1st material response

Specification Or Standard:

B5 composition and 1 type or 2 type and as-cast condition

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A13100
